The X3302 brings state-of-the-art IR flame detection to the difficult task of detecting invisible hydrogen flames. Focusing on the water-band IR emissions of hydrogen flame, the X3302 overcomes the limited detection range and false alarm tendencies of other flame detectors by employing field proven multispectrum infrared (MIR) technology. The result is unsurpassed flame sensitivity with discrimination of non-flame sources in situations where traditional flame detectors are unsuitable.

Utilizing the X3301’s multi-patented signal processing algorithms, the X3302 provides a breakthrough in flame detection/surveillance of hazardous materials that produce mostly water vapor, and little or no Carbon Dioxide (CO₂) in the combustion process. The detection capability of the X3302 is double that of traditional UV and UVIR detectors. At the same time, it attains solar resistance and insensitivity to artificial lights, lightning, and “blackbody” radiation, which still plague other detection technologies.

The X3302 provides superior performance in applications that are at the extremes, and where background IR radiation is a normal condition:

- Hangars with hydrogen or hypergolic fueled vehicles
- Refineries hydrogen storage areas
- Chemical loading racks
- Hydrogen compressor areas
- Hydrogen cooled generators
- Fertilizer plants
- Silane storage
- Gas plants
- Refrigerator buildings

*Multispectrum technology advancements are covered under the following U.S. Patents: 5,995,008, 5,804,825 and 5,850,182.

### DESCRIPTION

**YEAR 5 WARRANTY**

<table>

| Extended detection range. | - Maximum false alarm rejection.
| New standard set for cone of vision. | - Microprocessor controlled heated optics. |
| HART models available. | - Calibrated automatic optical check for each sensor eliminates need for testing with external test lamp. |
| FDT/DTM capable.      | - RFI and EMC Directive compliant. |
| Multiple sensitivity levels. | - Event logging with time and date stamp. |
| Solar resistance.      | - Integral wiring compartment for ease of installation. |
|                        | - Reliable fault diagnostics.  |
|                        | - Suitable for heavy industrial applications. |
|                        | - Explosion/flame proof (Ex d) or increased safety installations (Ex d e) in hazardous locations. |

**BENEFITS**

- Lowest cost of coverage.
- Ability to detect smaller fires earlier.
- Solid cone of vision to 100 feet for hydrogen.
- Better detection zoning capability.
- Best combination of flame detection and false alarm rejection.
- Low maintenance costs.
- Reliable fault diagnostics.
- Suitable for heavy industrial applications.
**SPECIFICATIONS**

**Operating Voltage**
24 Vdc. Operating range is 18 to 30 Vdc.

**Power Consumption**
4 watts minimum (without heater), 17 watts at 30 Vdc with EOL resistor installed and heater on maximum.

**Relays**
Contacts rated 5 amperes at 30 Vdc.

- **Fire Alarm:** Form C (NO and NC contacts) — normally de-energized — latching/non-latching.
- **Fault:** Form A (NO contacts) — normally energized — latching/non-latching.
- **Auxiliary:** Form C (NO and NC contacts) — normally energized — latching/non-latching.

**Current Output (Optional)**
0–20 mA, with a maximum loop resistance of 500 ohms from 18–19.9 Vdc, 600 ohms from 20–30 Vdc.

**Temperature Range**

- **Operating:** –40°F to +187°F (–40°C to +75°C).
- **Storage:** –67°F to +185°F (–55°C to +85°C).

Hazardous location ratings from –55°C to +125°C available on extended temperature model.

**Humidity Range**
0 to 95% relative humidity, can withstand 100% condensing humidity for short periods of time.

**Wiring**
16 AWG or 2.5 mm² shielded cable is recommended.

**Enclosure Material**
Copper-free aluminum or 316 stainless steel.

**Response Characteristics**

**Very High Sensitivity**
